Artesian Fresh Inc tapped into a confined aquifer nearly 400ft below the earth's surface. An abundant supply of artesian water that flows through a completely sealed delivery system, free of human contact, and is never exposed to the environment, was discovered.

What is Artesian Water? A well drilled through a "confining layer" such as clay, which due to hydraulic head pressures rise up the well casing with great pressure to an elevation at the static level of the tapped confined aquifer. The natural filtration of the confining beds provide a protective shield from potential contamination. Artesian water is of superior quality to other forms of water.

What is Spring Water? A channel of water surfacing from a stream not far underground and has the potential for contamination from wildlife and environmental elements. Water naturally flows from a spring but requires filtration and treatment which can change the natural chemical composition of the water.
